Top 10 Learning Management System Solution Providers- 2018

Taking learning out of the arena of classrooms, learning management systems (LMS) has emerged as a potential delivery tool for education and training, with its interactive features making it a more fun and engaging process. Some of the common features such as social media-like characteristics, announcement options, and searching capabilities make LMS more accessible. Creating classes, adding multimedia content including screen-casts with video tutorials further simplifies the learning process using LMS, making it a popular feature. Gamified elements (badges, points, and leaderboards) which foster a competitive spirit, are also sought-after features in LMSs. The current generation of learners seeks, through LMS, a user-friendly platform that meets their requirements.

Upcoming LMS trends include the facility to integrate with mobile systems and offline studying facilities, making it usable while on the move. Connecting students via audio and

video channels in e-conferences, which allows connections to people beyond the classroom, are also becoming part of the next wave. Selling courses and integration with payment processors, integrating with third-party systems to exchange data, which further diminish physical barriers, are some of the trends expected to grow in 2018.

With several LMS solutions flooding the market, it becomes important to identify the pros and cons of each to figure out which LMS will best fulfill one's requirements. Keeping this in mind, a panel comprising of distinguished CEOs, CIOs and analysts comprising Education Technology Insight's editorial board has charted out the top 10 companies providing effective solutions for Learning Management Systems. These companies offer powerful solutions coupled with innovative strategies that make e-learning smoother, easier and more accessible.

We present to you Education Technology Insight's "Top 10 LMS Solution Providers - 2018."

Company:
Illumeo

Description:
Serves corporations and corporate professionals across finance, accounting, and beyond with professional development and CPE

Key Person:
John Kogan
CEO/CFO, Founder

Website:

Illumeo The LMS for CPE

Based on decades of experience working in corporate finance and as a CFO at both startups and some of the biggest global companies, John Kogan directly experienced that traditional corporate learning management systems (LMS) miss the mark when it comes to addressing the learning needs of the professionals working in finance, accounting, and throughout the ‘Office of the CFO’.

The typical LMS provides employees with generic content, such as basic MS Excel skills, that in no way helps the already highly-skilled employees in complex areas such as corporate finance, accounting, tax, or internal audit, better understand their jobs. Nor do they offer the continuing professional education credits (CPE) that these folks need to maintain their professional certifications (such as CPAs, CMAs, etc.). This leads to massive “live training” costs, time wasted looking for solutions outside of what is offered at the company, and ineffective, low ROI professional development. These shortcomings inspired Mr. Kogan to establish Illumeo.

As a global, cloud-based training solutions company with a modern platform and over 1,000 on-demand courses, Illumeo helps skilled corporate professionals improve their knowledge, remain competitive, and get their required CPE.

Through Illumeo’s tactical learning capabilities, professionals gain knowledge and learn new skills instantly through Google search-like content discovery and delivery. Strategic learning, through more advanced ‘full cycle professional development’, begins with a 10-minute knowledge assessment that measures results against hundreds of benchmark jobs to identify knowledge gaps. With visibility into their knowledge gaps, the employee and their manager, along with HR/L&D support, can collaboratively figure out which areas to focus development on, and build a customized training program, including job duties, that saves time for the employee and money for the company. Simply stated, users efficiently assess and learn, then reinforce their learning with work activity, and then reassess their knowledge to continue the learning journey.

The platform offers a massive library of highly specialized content with over 1,000

on-demand courses and webinars. Illumeo provides simple dashboards and advanced reporting that allow users, managers and HR/L&D to track learning plans and get a direct view of each employee’s learning process as well as visibility into the entire organization’s learning progress.

“**Illumeo offers world-class content, all created by senior professionals with decades of experience working in the Office of the CFO**

”

“The Illumeo platform gets very high marks from corporate clients for ease of use and effectiveness. All courses are created by senior professionals with experience as CFOs, Controllers, Chief Audit executives, and others who have decades of experience working in the Office of the CFO,” says John Kogan, CEO & Founder of Illumeo. “Be it technical accounting,

ROI analysis, closing the books faster, creating pivot tables, performing stock price analysis, or being the right leader to manage the team, all courses are carefully developed to help professionals learn faster and earn their CPE.”

With the likes of Oracle, Carnival, Verizon, Intuit and Cisco as clients, Illumeo’s solutions work at companies of any size, alongside client’s existing LMS or standalone, and facilitate on-demand e-learning for their highly qualified corporate professionals. As the solution integrates with clients’ existing LMS, it makes for fast and easy implementation.

Illumeo is growing rapidly, bringing their ‘LMS for CPE’ to new markets across the globe while expanding their feature set. “Our mission is to help professionals remain focused on the learning continuum and gain mastery in their line of work, all while earning CPE and maintaining the professional certifications both they and their companies desire,”

says Kogan. **ET**
